# 1947 DELFOS 9169

## A NEW AND VALUABLE DELFOS STRAIN

**PLANT TYPE**—Medium vigorous, spreading and prolific.

**BOLL SIZE**—65 to 75 per pound of seed cotton. Extra large for Delfos.

**MATURITY**—Early for a big boll cotton, but slightly later than 531-C.

**PICKING QUALITIES**—Good bolls, rather round, mostly five lock, and opens well.

**STAPLE LENGTH**—1-3/32 to 1-5/32.

**LINT PERCENTAGE**—35 to 38 percent.

**LINT CHARACTER**—Medium in fineness, strength and uniformity.

**FOLIAGE**—Medium tho heavier than 531-C.

**STORMPROOFNESS**—Good.

**SEED SIZE**—Average 4000 per pound.

**SEED MILLING VALUE**—Extra high—see back of sheet.

---

Delfos 9169 is a selection from Delfos 531-C and has been selected and increased in response to the demand for a Delfos cotton with larger boll, better picking qualities, more plant vigor, and high acre yield of lint. From this standpoint 9169 is really an outstanding cotton. Shows high wilt resistance.

In official cotton variety tests throughout the cotton belt, Delfos 9169 has consistently ranked near the top in lint and money value per acre.

Delfos 9169 should please the most exacting planter — High yield. High lint percentage, High quality lint, and extra high seed milling value. We know of no other cotton that ranks so high in all these qualities.

# DELFOS 9169 RECORD

STONEVILLE, MISS.—Experiment Station.

1943—First in lint per acre. 83 lbs. more than nearest competitor.

1944—Second in money value.

STATE COLLEGE, MISS.

1944—First in money value.

HOLLY SPRINGS, MISS.

1944—Valley—First in money value.

Hills—Second in money value.

ST. JOSEPH, LOUISIANA.

1943—Second in money value, Stoneville 2-B ranking first.

1944—First in money value.

TENNESSEE.

1944—First in money value.

Cottonseed data of selected samples from New Strains Study,  
Delta Experiment Station, Stoneville, Miss., 1944.

Variety	Ammonia	Oil	Grade	Value Per ton
	Percent	Percent		Dollars
Delfos 531C (8303)	3.58	20.5	108.5	60.76
